

**MOST AFFECTED AGE GROUP AND  
QUARANTINED RATIO OF REGIONS IN THE  
PHILIPPINES**

Benjamin Samuel G. Go

# SUMMARY

People aged 19 to 39 are more susceptible to COVID-19

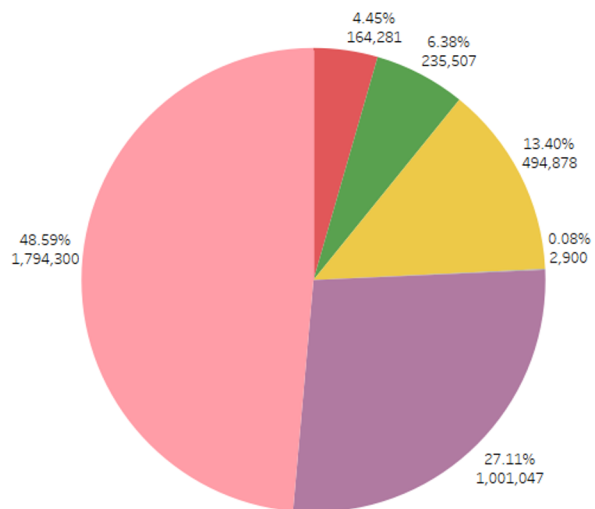

Most Regions account that most of the patients tested positive do not practice quarantine/s

# GRAPHS

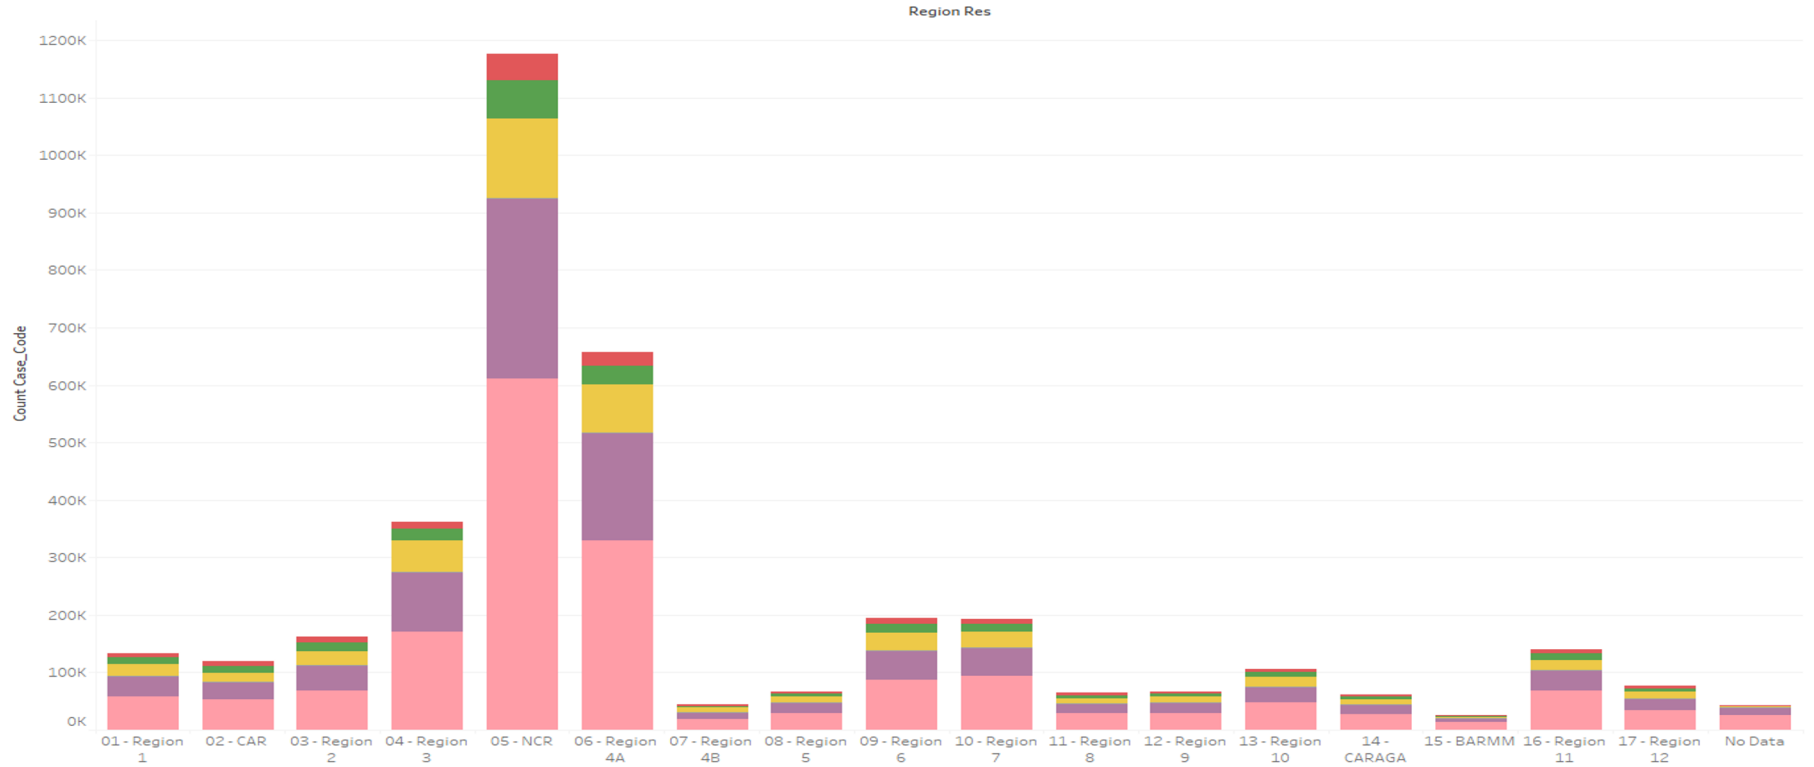

## Percent Total of Age Groups

### Age (group)

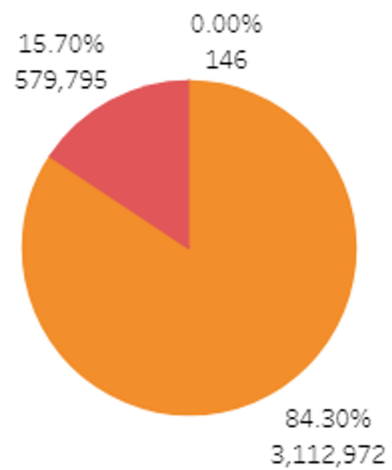

- Adolescence (13-18)
- Child (0-12)
- Senior Adult (60+)
- Other
- Middle-Aged Adult (..)
- Young Adult (19-39)

## Age Groups Per Region

All regions have younger adults as the top 1 in most positive cases

## Percent Total of Quarantined

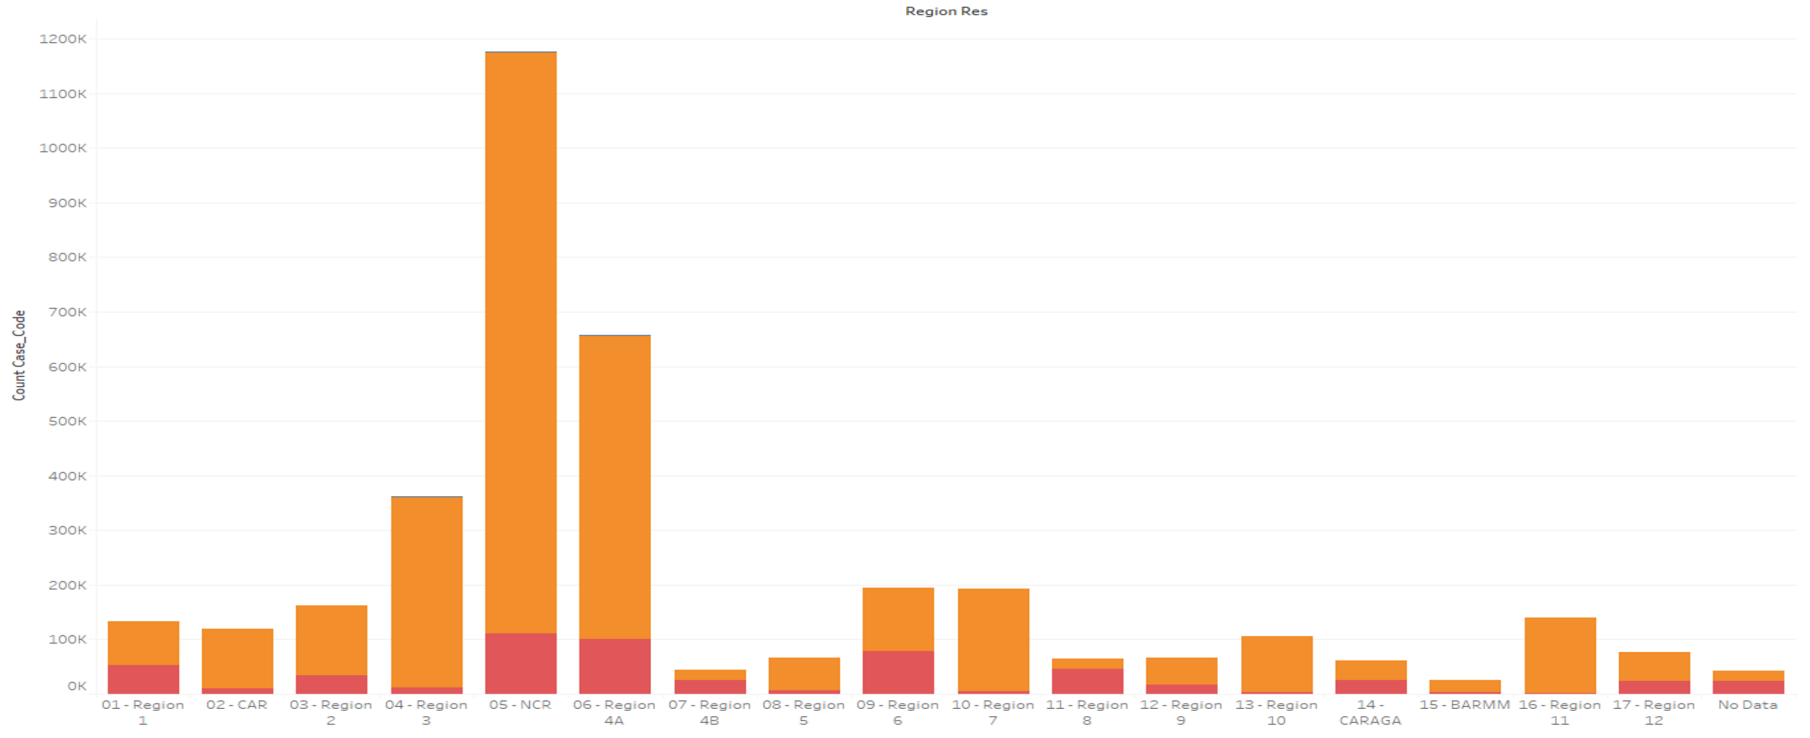

Quarantined

Null

NO

YES

## Quarantined Per Region

11 - Region 8 has the highest quarantined ratio of over 70.58%

# CONCLUSION

Discussions in the importance of health protocols are in need due to low quarantines being practiced.

NCR is the most populated region of the Philippines, and has the most cases overall.

Based on the age group data, adults are more at risk.
